

Drinking Water Quality and Compliance SaskWater Wakaw-Humboldt Potable Water Supply System and Treatment Plant 2021 Notification to Consumers

The Water Security Agency (WSA) requires that, at least once each year, waterworks owners provide notification to consumers of the quality of water produced and supplied as well as information on the performance of the waterworks in submitting samples as required by a Permit to Operate a waterworks. The following is a summary of the SaskWater Wakaw-Humboldt Regional Water Supply System (RWSS) and Treatment Plant water quality and sample submission compliance record for the <u>January 1, 2021 to December 31, 2021</u> time period. This report was completed on January 31, 2022. Readers should refer to the WSA's <u>Municipal Drinking Water Quality Monitoring Guidelines</u> for more information on minimum sample submission requirements and types of samples. Permit requirements for a specific waterworks may require more sampling than outlined in the Agency's monitoring guidelines. If consumers need to know more about drinking water in Saskatchewan, more detailed information is available from: http://www.hc-sc.gc.ca/ewh-semt/pubs/water-eau/index-eng.php.

BACTERIOLOGICAL QUALITY

| Parameter | Limit | Regular Samples Required | Required Samples Submitted | # of Positive Regular Submitted |
|---------------------|----------------------|-----------------------------|-------------------------------|------------------------------------|
| Total Coliform | 0 Organisms/100 mL | 156 | 156 | 0 |
| E. Coli | 0 Organisms/100 mL | 156 | 156 | 0 |
| Background Bacteria | Less than 200/100 mL | 156 | 156 | 0 |

Analysis is performed on a single sample for all parameters mentioned above. All waterworks are required to submit samples for bacteriological water quality; the frequency of monitoring depends on the population served by the waterworks.

WATER DISINFECTION

Chlorine Residual in Distribution System - From Test Results Submitted with Bacteriological Samples

| Minimum Limit Parameter (either/or) | | Range (mg/L) | # Tests Required | # Tests Submitted | # Adequate Chlorine | |
|-------------------------------------|-----------|--------------|---------------------|----------------------|------------------------|--|
| Free Chlorine | 0.10 mg/L | 0.46 - 1.72 | 156 | 156 | 450 | |
| Total Chlorine | 0.50 mg/L | 0.62 - 2.00 | 156 | 156 | 156 | |

A minimum of 0.10 milligrams per litre (mg/L) free chlorine residual <u>OR</u> 0.50 mg/L total chlorine residual is required at all times throughout the distribution system. An adequate chlorine is a result that indicates that the chlorine level is above the regulated minimums. A waterworks is required to submit chlorine residual test results on every bacteriological sample they submit.

Free Chlorine Residual for Water Entering Distribution System

| Parameter | Limit (mg/L) | Range (mg/L) | # Tests Required | # Tests Performed | % Adequate Chlorine |
|---------------|--------------|--------------|---------------------|----------------------|------------------------|
| Free Chlorine | 1.30 | 1.33 - 2.22 | Continuous | Continuous | 100 |

Residuals are monitored continuously and multiple tests are performed on a daily basis by waterworks operators and are recorded in operation records.

TURBIDITY

Turbidity for Water Leaving the Filters

Filter #1

| Parameter | Limit (NTU) | Range (NTU) | 95 th Percentile (NTU) | # Tests Required | # Tests Performed | # months Exceeding Limit |
|-----------|--|---------------|---|---------------------|----------------------|--------------------------------|
| Turbidity | < 0.30 – 95% of time each month and; not to be > 0.3 for > 12 consecutive hours; never >1.0 | 0.050 - 0.370 | 0.078 | Continuous | Continuous | 0 |

Filter #2

| Parameter | Limit (NTU) | Range (NTU) | 95 th Percentile (NTU) | # Tests Required | # Tests Performed | # months Exceeding Limit |
|-----------|--|---------------|---|---------------------|----------------------|--------------------------------|
| Turbidity | < 0.30 – 95% of time each month and; not to be > 0.3 for > 12 consecutive hours; never >1.0 | 0.030 - 0.370 | 0.049 | Continuous | Continuous | 0 |

Filter #3

| Parameter | Limit (NTU) | Range (NTU) | 95 th Percentile (NTU) | # Tests Required | # Tests Performed | # months Exceeding Limit |
|-----------|--|---------------|---|---------------------|----------------------|--------------------------------|
| Turbidity | < 0.30 – 95% of time each month and; not to be > 0.3 for > 12 consecutive hours; never >1.0 | 0.040 - 0.310 | 0.071 | Continuous | Continuous | 0 |

Filter #4

| Parameter | Limit (NTU) | Range (NTU) | 95 th Percentile (NTU) | # Tests Required | # Tests Performed | # months Exceeding Limit |
|-----------|--|---------------|---|---------------------|----------------------|--------------------------------|
| Turbidity | < 0.30 – 95% of time each month and; not to be > 0.3 for > 12 consecutive hours; never >1.0 | 0.040 - 0.330 | 0.063 | Continuous | Continuous | 0 |

Turbidity in the Distribution System - From Test Results Submitted with Bacteriological Samples

| Parameter | Limit (NTU) | Range (NTU) | # Tests Required | # Tests Performed | # Exceeding Limit |
|-----------|-------------|-------------|---------------------|----------------------|----------------------|
| Turbidity | No standard | 0.03 - 0.22 | 156 | 156 | 0 |

Turbidity in Water Entering the Distribution System

| Parameter | Limit (NTU) | Range (NTU) | Average (NTU) | # Tests Required | # Tests Performed | # Exceeding Limit | |
|-----------|-------------|-------------|------------------|---------------------|----------------------|----------------------|--|
| Turbidity | No standard | 0.02 - 0.39 | 0.049 | Continuous | Continuous | 0 | |

Turbidity is a measure of water treatment efficiency. Turbidity measures the "clarity" of the drinking water and is reported in Nephelometric Turbidity Units (NTU). All waterworks are required to monitor turbidity at the water treatment plant. The turbidity is done daily with bench testing instrument, as well as continuously with an online analyser.

Turbidity in Raw Water Entering the Water Treatment Plant

| Parameter | Limit (NTU) | Range (NTU) | # Tests Required | # Tests Performed | # Exceeding Limit |
|-----------|-------------|-------------|---------------------|----------------------|----------------------|
| Turbidity | No standard | 0.10 - 77.2 | 50 | 728 | 0 |

Additional testing done for information purposes.

FLUORIDE

From Treated Water at the Water Treatment Plant (on-site testing)

| Parameter | Maximum | Average | Maximum | # Samples | # Samples | # Exceeding |
|-----------|--------------|---------|---------|-----------|-----------|-------------|
| | Limit (mg/L) | (mg/L) | (mg/L) | Required | Submitted | Limit |
| Fluoride | 1.50 | 0.58 | 0.88 | 365 | 730 | 0 |

Additional testing was done for informational purposes.

From Water in the Distribution System (off-site testing)

| Parameter | Maximum Limit (mg/L) | Average (mg/L) | Maximum (mg/L) | # Samples Required | # Samples Submitted | # Exceeding Limit |
|-----------|-------------------------|----------------|----------------|-----------------------|------------------------|----------------------|
| Fluoride | 1.50 | 0.53 | 0.67 | 52 | 51 | 0 |

The fluoride sample collected on September 27, 2021 was not analysed due to lab error. The EPO was notified.

HALOACETIC ACIDS (HAAs)

Haloacetic acids are formed when chlorine reacts with organic matter in water. The five regulated haloacetic acids are: monochloroacetic acid, dichloroacetic acid, trichloroacetic acid, monobromoacetic acid, and dibromoacetic acid. The sum of the concentrations of these five components is referred to as HAA5. The limit for HAAs is a long term objective based on an annual average of seasonal samples.

| Parameter | Maximum | Average | # Samples | # Samples |
|------------------|--------------|---------|-----------|-----------|
| | Limit (mg/L) | (mg/L) | Required | Submitted |
| Haloacetic Acids | 0.080 | 0.050 | 2 | 2 |

TRIHALOMETHANES (THM)

Trihalomethanes are formed when chlorine reacts with organic matter in water. The four THM compounds are: chloroform, dibromochloromethane, bromodichloromethane (BDCM) and bromoform. The sum of the concentrations of these four components is referred to as Total Trihalomethanes. The limit for THM is a long term objective based on an annual average of seasonal samples.

| Parameter | Maximum Limit (mg/L) | Average (mg/L) | # Samples Required | # Samples Submitted |
|----------------|-------------------------|----------------|-----------------------|------------------------|
| Trihalomethane | 0.100 | 0.060 | 2 | 2 |

CHEMICAL - GENERAL

SaskWater Wakaw-Humboldt Potable Water Supply System is required to submit water samples for the WSA's General Chemical category once per three months every year.

| Parameter | MAC (mg/L) | AO * (mg/L) | Sample Results | # of Samples Required | # of Samples Submitted |
|-------------------------------|---------------|----------------|-------------------|--------------------------|---------------------------|
| Total Alkalinity (mg/L) | | 500 | 134 | 4 | 4 |
| Bicarbonate (mg/L) | No | Objective | 163 | 4 | 4 |
| Calcium (mg/L) | No | Objective | 45 | 4 | 4 |
| Carbonate (mg/L) | No | Objective | <1 | 4 | 4 |
| Chloride (mg/L) | | 250 | 17 | 4 | 4 |
| Fluoride (mg/L) | 1.5 | | 0.51 | 4 | 4 |
| Total Hardness (mg/L) | | 800 | 184 | 4 | 4 |
| Hydroxide (mg/L) | No | Objective | <1 | 4 | 4 |
| Magnesium (mg/L) | | 200 | 17 | 4 | 4 |
| Nitrate (mg/L) | 45 | | 1.4 | 4 | 4 |
| pH (pH units) | | 7.0 - 10.5 | 7.84 | 4 | 4 |
| Potassium (mg/L) | No (| Objective | 3.4 | 4 | 4 |
| Sodium (mg/L) | | 300 | 26 | 4 | 4 |
| Specific Conductivity (µs/cm) | No (| Objective | 480 | 4 | 4 |
| Sulphate (mg/L) | | 500 | 88 | 4 | 4 |
| Sum of lons | No (| Objective | 361 | 4 | 4 |
| Total Dissolved Solids (mg/L) | | 1500 | 291 | 4 | 4 |

MAC - Maximum Acceptable Concentration

AO - Aesthetic Objective

CHEMICAL - HEALTH

SaskWater Wakaw-Humboldt Potable Water Supply System is required to submit water samples for the WSA's Chemical Health category once every year.

| Parameter | MAC (mg/L) | IMAC (mg/L) | AO * (mg/L) | Sample Results (mg/L) | # of Samples Required | # of Samples Submitted |
|-----------|---------------|----------------|----------------|--------------------------|--------------------------|---------------------------|
| Aluminum | | No Objective | | 0.037 | 1 | 1 |
| Antimony | 0.006 | | | < 0.0002 | 1 | 1 |
| Arsenic | 0.010 | | | 0.0001 | 1 | 1 |
| Barium | 1.0 | | | 0.078 | 1 | 1 |
| Boron | | 5.0 | | 0.03 | 1 | 1 |
| Cadmium | 0.005 | | | 0.00002 | 1 | 1 |
| Chromium | 0.05 | | | < 0.0005 | 1 | 1 |
| Copper | | | 1.0 | 0.0056 | 1 | 1 |
| Iron | | | 0.3 | 0.0014 | 1 | 1 |
| Lead | 0.01 | | | 0.0003 | 1 | 1 |
| Manganese | | | 0.05 | 0.0010 | 1 | 1 |
| Selenium | 0.01 | | | 0.0004 | 1 | 1 |
| Silver | | No Objective | | < 0.00005 | 1 | 1 |
| Uranium | 0.02 | | | 0.0004 | 1 | 1 |
| Zinc | | | 5 | 0.0013 | 1 | 1 |

MAC - Maximum Acceptable Concentrations

IMAC - Interim Maximum Acceptable Concentrations

AO - Aesthetic Objective

CHEMICAL - ORGANICS

SaskWater Wakaw-Humboldt Potable Water Supply System is required to submit water samples for the WSA's Synthetic Organic category once every 2 years. 2021 not is a required sampling year. The 2020 results are included for informational purposes.

| Parameter | MAC (mg/L) | IMAC (mg/L) | AO* (mg/L) | 2020 Sample Results (mg/L) | # of Samples Required | # of Samples Submitted |
|---------------------------|---------------|----------------|---------------|-------------------------------|--------------------------|---------------------------|
| Benzene | 0.005 | | | <0.0005 | 0 | 0 |
| Benzo(a)pyrene | 0.00001 | | | < 0.00001 | 0 | 0 |
| Carbon tetrachloride | 0.005 | | | <0.002 | 0 | 0 |
| Dichlorobenzene 1,2 | 0.2 | | | < 0.0005 | 0 | 0 |
| Dichlorobenzene 1,4 | 0.005 | i - | | < 0.0005 | 0 | 0 |
| Dichloroethane 1,2 | | 0.005 | | < 0.0005 | 0 | 0 |
| Dichloroethylene 1,1 | 0.014 | | | < 0.0005 | 0 | 0 |
| Dichloromethane | 0.05 | | | < 0.0005 | 0 | 0 |
| Dichlorophenol 2,4 | 0.9 | | | < 0.0002 | 0 | 0 |
| Ethylbenzene | | | 0.0016 | < 0.0005 | 0 | 0 |
| Monochlorobenzene | 0.080 | | 2 | < 0.0005 | 0 | 0 |
| Tetrachlorophenol 2,3,4,6 | 0.10 | | | < 0.001 | 0 | 0 |
| Toluene | | | 0.024 | < 0.0005 | 0 | 0 |
| Trichloroethylene | 0.05 | | | < 0.0005 | 0 | 0 |
| Trichlorophenol 2,4,6 | 0.005 | | | < 0.002 | 0 | 0 |
| Vinyl Chloride | 0.002 | | | < 0.0005 | 0 | 0 |
| Xylene | | | 0.02 | < 0.0005 | 0 | 0 |

MAC - Maximum Acceptable Concentrations

AO - Aesthetic Objective

IMAC - Interim Maximum Acceptable Concentrations

CYANIDE AND MERCURY

Mercury enters water supplies naturally and as a result of human activities. Cyanide can enter source waters as a result of industrial effluent or spill events. These substances may represent a long-term health risk if the Maximum Acceptable Concentration (MAC) is exceeded.

| Parameter | Maximum Limit (mg/L) | Sample Results (mg/L) | # Samples Required | # Samples Submitted |
|-----------|-------------------------|--------------------------|-----------------------|------------------------|
| Cyanide | 0.2 | 0.002 | 1 | 1 |
| Mercury | 0.001 | <0.000001 | 1 | 1 |

^{*}Objectives apply to certain characteristics of, or substances found, in water for human consumptive or hygienic use. Compliance with drinking water aesthetic objectives (AO) is not mandatory as these objectives are in the range where they do not constitute a health hazards. The AO for several parameters (including hardness, magnesium, sodium and total dissolved solids) consider regional differences in sources and quality.

CHEMICAL - PESTICIDES

SaskWater Wakaw-Humboldt Potable Water Supply System is required to submit water samples for the WSA's Pesticide category once every 2 years. 2021 is not a required sampling year. The 2020 results are included for informational purposes.

| Parameter | MAC (mg/L) | IMAC (mg/L) | 2020 Sample Results (mg/L) | # of Samples Required | # of Samples Submitted |
|-------------------|---------------|----------------|-------------------------------|--------------------------|---------------------------|
| Atrazine | | 0.005 | < 0.0002 | 0 | 0 |
| Bromoxynil | | 0.005 | < 0.002 | 0 | 0 |
| Carbofuran | 0.09 | | < 0.0002 | 0 | 0 |
| Chlorpyrifos | 0.09 | | <0.0002 | 0 | 0 |
| Dicamba | 0.12 | | < 0.001 | 0 | 0 |
| 2, 4-D | | 0.10 | < 0.001 | 0 | 0 |
| Diclofop-methyl | 0.009 | | < 0.001 | 0 | 0 |
| Dimethoate | | 0.02 | < 0.005 | 0 | 0 |
| Malathion | 0.19 | | < 0.0002 | 0 | 0 |
| MCPA | 0.10 | | < 0.001 | 0 | 0 |
| Pentachlorophenol | 0.06 | | < 0.0005 | 0 | 0 |
| Picloram | | 0.19 | < 0.001 | 0 | 0 |
| Trifluralin | | 0.045 | <0.0002 | 0 | 0 |

MAC - Maximum Acceptable Concentrations

IMAC - Interim Maximum Acceptable Concentrations

MICROCYSTIN LR and/or TOTAL MICROCYSTIN TOXINS

SaskWater Wakaw-Humboldt Potable Water Supply System is required to sample for microcystin once every month from the treated water at the water treatment plant during the algal bloom period.

| Parameter | Maximum Limit (mg/L) | Average (mg/L) | # Samples Required | # Samples Submitted |
|-------------|-------------------------|----------------|-----------------------|------------------------|
| Microcystin | 0.0015 | <0.0001 | 4 | 4 |

RADIOLOGICAL

Gross alpha and beta activity is a measure of radioactivity within water. The activity is the frequency of release of alpha and beta particles after the nuclear decay of radionuclides. Should gross alpha or beta activity exceed a particular standard, further testing is required to identify the specific radionuclides present in water. Radionuclides can enter water from both natural sources and human activities.

| Parameter | Maximum Limit (Bq/L) | Result (Bq/L) | # Samples Required | # Samples Submitted |
|-------------|-------------------------|---------------|--------------------|---------------------|
| Gross alpha | 0.5 | <0.20 | 1 | 1 1 |
| Gross beta | 1.0 | 0.23 +/- 0.04 | 1 | 1 |

GIARDIA AND CRYPTOSPORIDIUM (in the raw water)

SaskWater Wakaw-Humboldt Potable Water Supply System is required to sample from the raw water entering the water treatment plant for giardia & cryptosporidium semi-annually (early spring and fall) and following upsets or significant events that may affect raw water quality.

| Parameter | Limit | Average (cysts or oocysts / 100 L) | # Samples Required | # Samples Submitted |
|-----------------|-------------|---------------------------------------|-----------------------|------------------------|
| Giardia | No Standard | 0.0 (cysts) | 2 | 2 |
| Cryptosporidium | No Standard | 0.0 (oocysts) | 2 | 2 |

LEAD AND COPPER (in the distribution system)

| Parameter | Limit | # Tests Required | # Tests Performed | Maximum Result (mg/L) |
|-----------|-----------|---------------------|----------------------|-----------------------|
| Lead | No Limit | 12 | 12 | 0.0003 |
| Copper | INO LIMIT | 12 | 12 | < 0.00829 |

The Water Security Agency required one round of initial sampling to be completed between July 1st and August 31st, 2021 to determine if there are concerns related to effects on human health (EPB 202). These samples were taken at various points in the distribution system. At this time there are no limits applied to these sample results.

More information on water quality and sample submission performance may be obtained from:
